QUADCOPTER ANATOMY

ONE-BOARD DRONE

A quadcopter whose circuit board is also its frame. Drag to turn it a full 360 degrees, scroll or pinch to zoom, and tap any part to see what it does.

COPPER LAYERS

Battery power | 5 V rail | Gyro bus (SPI) | Receiver serial | Motor command (DShot) | Motor phases

SIGNAL PATH

Remote → RX → FC → ESC ×4 → Motors

POWER PATH

Battery → PDB → ESC ×4 → 5V BEC → FC

Flight Controller | ESCs (×4)

Battery | Power Distribution

Remote Controller | Radio Receiver

IMU

5 V Regulator

Motors & Props

Frame PCB

THE BOARD IS THE BODY

The circuit board is the airframe. Four arms carry the motors, the centre carries every electronic part, and copper traces replace most of the wiring.

SHAPE	X layout, arms at 45 degrees
WIRING	Copper on the top layer, ground plane below (not drawn)
UNDERSIDE	Battery strapped beneath the centre
LOAD PATH	Thrust travels through the arms into the centre
